COIR MATTINGS

Coir matting is a type of flooring made from the natural fibers of coconut husks, known as coir.

These mats are valued for their durability, water resistance, and eco-friendly nature

Coir matting comes in various forms, including floor coverings, runners, and can be found with or without latex backing and in different colours and designs

Latex backing offers a good grip on various floor surfaces, preventing the coir matting from sliding or slipping, which is especially important in high-traffic areas or where there is a risk of falls. Sizes upto 4m width and length as per customers requirement.

COIR GEOTEXTILES

Coir geotextiles are 100% natural, biodegradable fabrics made from coir yarn, derived from coconut husks. They are widely used for erosion control and soil stabilization, particularly in landscaping and geotechnical engineering. These geotextiles are strong, durable, and naturally resistant to rot, mold, and moisture, eliminating the need for chemical treatments. They effectively prevent soil erosion on slopes and embankments by holding soil in place and dissipating the energy of flowing water.

Coir geotextiles are indeed an excellent choice for rural road construction promote the growth of new vegetation by absorbing water and preventing the topsoil from drying out.

COIR LOGS

Coir geo textile logs are cylindrical structures made from coconut coir fiber, encased in a coir yarn netting, and used for erosion control and slope stabilization. They are an environmentally friendly alternative to synthetic materials, offering a natural way to manage soil erosion and promote vegetation growth.
